

# Toxicity Database

for public, proprietary and in-house data

Vitic Nexus is a chemical database and information management system containing expert curated, high quality, peer reviewed toxicity data from both published and unpublished sources.

#### Skin Sensitisation Assessment

Extensive coverage of skin sensitisation data in Vitic supports read across as a means of reducing the need for animal tests.

#### Expert ICH M7 Support

Rapidly find relevant supporting examples for your impurities by structure, substructure or similarity searching.

#### Current Toxicological Data

Regular updates by Lhasa's dedicated expert data team ensures access to the latest toxicity data.

#### Lhasa, a Trusted Data Source

All Vitic data is curated and added by expert Lhasa scientists and then thoroughly peer reviewed.

#### One Search, Multiple Datasets

Searches can be carried out across multiple datasets to ensure all relevant results are returned within one interactive interface.

#### Meeting Regulatory Requirements

Analysis of actual and potential impurities by conducting database and literature searches across carcinogenicity and material mutagenicity data.

#### Intuitive Searching

Easily build complex queries around both structures and associated toxicological data, allowing retrieval of specific information.

#### Rapid Access to your Data

Intuitive data entry tools are provided, enabling storage of in-house data.
