

Lhasa Carcinogenicity Database

A free, online database for the retrieval of relevant carcinogenicity data

Lhasa Limited has built on the work of Dr. Lois Swirsky Gold and the Carcinogenic Potency Database (CPDB) to develop a freely available database with new features and enhancements. The data used is the same as in the original CPDB, however the redesigned user interface provides an improved experience for the end user.

BENEFITS

- **Regular maintenance** – Both the software and the data will be updated regularly to ensure it stays current.
- **Freely available online** – There is no need to install the database, it can be easily accessed online at any time.
- **Attractive user interface** – The redesigned user interface is clear, intuitive and easy to use.
- **Lhasa TD₅₀ provided** – Lhasa Limited has created its own TD₅₀ from the data, based on Gold's methods. Both the Lhasa TD₅₀ and Gold TD₅₀ will be provided.
- **Structure searchable:** The ability to easily build complex queries around both structures and associated data, which allows for the retrieval of specific information, aiding decision support and improving productivity.
