

Lhasa Limited's Skin Sensitisation Assessment Portfolio

Derek alerts and HPC alerts indicate which of the Dermal Sensitisation Thresholds (DSTs) is the most appropriate to use.

DERMAL SENSITISATION THRESHOLDS

Derek Nexus provides comments, references and examples to aid in hazard identification.

DEREK ALERTS

NEGATIVE PREDICTIONS

Negative predictions allow confidence when classifying a compound as a non-sensitiser.

POTENCY PREDICTIONS

Extrapolating hazard identification to risk, Derek Nexus provides EC3 predictions to inform potency.

EC3

DEFINED APPROACH TOOL

Quickly and efficiently predict hazard and potency categories by combining a Derek Nexus prediction with h-CLAT and DPRA data.

TOXICITY DATABASE

Vitic provides access to both *in vivo* skin sensitisation data and data from New Approach Methodologies (*in chemico/in vitro* assays etc.).
